Butterfly Conservation Europe

The monitoring data show how a common species like the common blue (Polyommatus icarus) surprises us after a long and hot summer. Transect counts reveal that this year there is a huge third generation on the wing in The Netherlands. Normally, such a third generation happens occasionally and is quite small, but his year there are common blues everywhere! What a nice goodbye at the end of the summer!

Annual Reports

There are many different Butterfly Monitoring Schemes in Europe that generate frequently, in some cases annually, reports on the data collected on their BMS. Here you can find some of the reports produced recently:
